

INTRODUCING

WATER RIGHT

"PROBE STEP"

The

"The AFFORDABLE Soil Probe People"

Pat. Pending

- * HARD OR COMPRESSED SOIL?
- * ROCKY OR GRAVELY SOIL?

WATER RIGHT has the answer!

In the past, some of our customers in areas with hard or rocky soil, have asked us about providing a soil probe with a foot step. WATER RIGHT has answered their needs by designing the "PROBE STEP". This device slides over one side of the probe's handle and then clips onto the downpipe. It is designed to work with the WATER RIGHT Soil Probe, but will work with most any 1" dia. probe. This ingenious device slides on and off effortlessly and provides a sturdy place to apply foot pressure. It is made of 5/16" zinc plated steel for durability and longevity.
